

IAB UK Gold Standard 2.1

Summary of Updates

- In addition to digital display and video, the Gold Standard will cover companies that specialise in emerging digital media offerings like Audio, CTV and In-game advertising.
- The Ad Fraud criteria has been renamed Security and Fraud to better suit the expanding requirements of this criteria.
- Requirements within Security and Fraud will be updated to include:

Ads.txt 1.1

• Ads.txt has been updated to require companies adhere to the latest version of ads.txt, 1.1, which increases levels of transparency and strengthens the ads.txt initiative.

Buyers.json and DemandChain Object

• Both initiatives are new additions for Gold Standard 2.1. They have been introduced to the Gold Standard as they bring more end-to-end transparency of the programmatic supply chain, helping publishers address the challenge of Scam Ads.

Open Measurement SDK (OM SDK)

The OM SDK is a widely adopted industry standard. Requirements to adopt this
initiative as part of the Gold Standard have been introduced as this initiative is
successful in facilitating third party viewability and verification measurement for ads
served in web video, app and
CTV environments.

Summary of Categories
